

Morrison's Newcastle Great Park

Hello,

Update no2. We have progressed well, and the foundations are all in, the steel frame is up, and we are starting to put on a roof. Around the side walls of the building, we are completing the beams that hold the floor in place. We will soon be installing the concrete floors. As you can imagine, that a lot of concrete.

Next up will be walls around the building, then we start to form the car park and the internal structure.

Some of the concrete works need special treatment and finishes that will take longer than a normal working day. We will try our best not to disturb you but please bear with us for this short duration.

We will continue to provide updates but if anyone wishes to comment on or discuss the project with us please contact the project manager by email neil.haire@rg-group.co.uk.
